## 12. ECOLOGICAL INFORMATION

**GENERAL INFORMATION:**

The environmental risk assessment shows that Brodifacoum does not cause unacceptable risk in the aquatic environment, terrestrial environment or in the atmosphere. Brodifacoum is neither expected to accumulate in sediment nor contaminate groundwater. Predatory and scavenging mammals and birds might be poisoned if they have eaten the bait. Use a bait station to minimize these risks. Please note, the data below reflects the active ingredient Brodifacoum. JAGUAR RODENTICIDE BLOX is formulated @0.005% or 50ppm Brodifacoum. Ecological effects would be significantly lower for JAGUAR RODENTICIDE BLOX.

**12.1. Toxicity**

For Brodifacoum:

Fish: 96h LC50 (*Oncorhynchus mykiss*) = **0.042 mg/l**

Invertebrates: 48h EC50 (*Daphnia magna*) **0.25 mg/l**

Algae: 72h EbC50 *Selenastrum capricornutum* = **ErC50 = 0.04 mg/l**

Microorganisms (activated sludge): **>0.058 mg/l** (based on water solubility at pH 7 and T = 20°C)

**12.2. Persistence and degradability**

For Brodifacoum: As no data on degradation in marine water, freshwater or sediment are available, Brodifacoum is considered to be potentially persistent. Brodifacoum is not readily or inherently biodegradable.

**12.3. Bioaccumulative potential**

The low water solubility (< 0.1 mg/l) and the high absorption characteristics of *Brodifacoum* (log Pow > 4.0, Log Koc = 8.50) combined with the potential for the active substance to ionise, indicate that the active substance has a negligible potential for leaching out of the wax block. It is therefore considered that the potential for percutaneous absorption from the finished biocidal product is minimal.

**12.4. Mobility in Soil**

Brodifacoum is immobile in soil (Koc > 9155 l/kg).

Mobility of Brodifacoum in soil is considered to be minimal.

**12.5. Results of PBT and vPvB assessment**

This mixture does not contain any substances that are assessed to be PBT or vPvB.

**12.6. Other adverse effects**

None.
